Pharmacists help people live healthier, better lives.
At the University of Iowa College of Pharmacy, you’ll develop the skills you need to be a leader in the field. With the resources of a Big 10 university and the community spirit of a small town, Iowa fosters an atmosphere of support and success.

In the College of Pharmacy’s brand new facility—complete with hybrid lab/research areas and collaborative workspaces—you’ll have access to some of the most advanced technological resources in the country. Iowa has a world-renowned health care campus, meaning you’ll study and work alongside experts from UI Hospitals & Clinics, giving you invaluable hands-on experience.

All of these opportunities will prepare you to help people live healthier, better lives.

As a pharmacist, you’ll be on the front lines of the health care field while enhancing patient care and promoting wellness. The esteemed faculty at Iowa are eager to help you do just that.

**Community pharmacy.** Community pharmacists provide prescription services and manage medication therapy for patients, helping them achieve the best possible health outcomes.

**Hospital pharmacy.** Hospital pharmacists provide medication services to patients in hospital settings and address complex and unique therapy needs while working closely with physicians and other health care providers.

**Public health.** The field is a wide one: Pharmacists working in public health may donate their time, knowledge, and skills to charitable efforts, or they may play a role in shaping large-scale public health initiatives.

**Consulting and long-term care.** These pharmacists possess good problem-solving skills, routinely monitor medication regimens, and are well-versed in drug interactions and the dosage requirements of unique populations.

**Managed care.** Pharmacists in managed care environments work to provide the best quality care at the most affordable price for patients.

**Pharmaceutical industry.** Private-sector roles include promotion of pharmaceuticals to health professionals, development of new drugs and dosage forms, clinical studies, and managing regulatory and legal issues.

**Research.** Research is absolutely critical to the development of new prescription drugs, treatments, and delivery methods. PharmDs can make a crucial contribution to these new discoveries.
